TECHNICAL NOTE · EU MARKET ACCESS

EUDR from 30 December 2026: a checklist for Turkish wood and furniture exporters

The amended Deforestation Regulation applies on schedule. Your EU importer files the statement, but the data has to come from you.

Ahmed Furkan Gul, Founder, Ganrich Advisory

October 2026

Executive summary

1. The EU Deforestation Regulation (EUDR), Regulation (EU) 2023/1115, applies from 30 December 2026 to large and medium operators and traders, and to micro and small operators of timber products already covered by the EU Timber Regulation. Other micro and small operators follow on 30 June 2027. The Commission's simplification review of 4 May 2026 concluded that the basic text should not be changed again.
2. The due diligence statement is filed by the operator that places the product on the EU market, usually your importer. As a Turkish exporter you file nothing, but your importer cannot file without the country of production, the geolocation of every plot where the wood was harvested, quantities, supplier details and evidence that the harvest was legal.
3. The 2025 amendment mainly eased obligations further down the EU supply chain. For a Turkish exporter, the data request from the first EU importer is unchanged, and it concerns the wood itself: where it was grown, not where the furniture was made.

What is fixed and what changed

Regulation (EU) 2025/2650, published on 23 December 2025, postponed application by a year, created a lighter regime for downstream operators and traders, allowed micro and small primary operators to use a one-off simplified declaration, and removed printed products from scope. The Commission's review report, COM(2026) 191 of 4 May 2026, confirmed the dates and proposed no further change to the basic text.

A delegated act adopted in July 2026 adjusted the product scope in Annex I. Wood remains one of the seven covered commodities, and many wood products, including panels and certain furniture codes, remain in scope. Scope is decided by customs code, so each product line should be checked against the current annex.

Where all relevant commodities come from countries classified as low risk, the operator may apply simplified due diligence and skip the risk assessment and mitigation steps. It must still collect the same information, including geolocation. The test is the country where the wood was harvested, not the country where the product was made.

The checklist

1. Scope. Check every product line you ship to the EU against Annex I by customs code. Products made entirely from material that would otherwise be discarded as waste are excluded.

2. Country of production. For every wood input, including sawn timber, panels, veneer and parts bought from traders, know the country where the wood was harvested.

3. Geolocation. Obtain the coordinates of each plot of land where the wood was harvested. For plots larger than four hectares a polygon is required; smaller plots can be given as a single point.

4. Date. Record the date or period of harvest. Wood must not come from land deforested, or from forest degraded, after 31 December 2020.

5. Legality. Hold evidence that the harvest complied with the laws of the country of production, including land use rights, harvesting permits, taxes and trade and customs rules.

6. Supply chain. Keep the name, address and email of each supplier and of each customer, and map which supplier provided which batch.

7. Segregation. Keep wood of known origin physically and administratively separate. Mixing it with wood of unknown origin can make the whole batch unusable for your importer.

8. Handover. Agree with each importer the format, timing and channel for the data, and how due diligence statement reference numbers will be passed along the chain.

The decision behind the requirement

For most Turkish furniture and wood exporters the decision is which supply routes to keep. Wood bought through traders who cannot or will not pass on geolocation data becomes difficult to sell into the EU, whatever its price. The first importer requests in late 2026 will show which suppliers can deliver.

There is also a commercial window. EU importers are now deciding which suppliers they can file for with confidence. A supplier who can send a complete, consistent data package per shipment is easier to keep than one who sends documents after each request.

Five common misreadings

“The EUDR has been postponed again.” The Commission has said there will be no further postponement, and its review proposed no change to the basic text.

“Small importers have until June 2027.” Micro and small operators of timber products already covered by the EU Timber Regulation apply from 30 December 2026.

“Our FSC or PEFC certificate is enough.” Certification can support risk assessment, but it does not replace geolocation and the other required information.

“Türkiye is low risk, so no data is needed.” Simplified due diligence still requires the information, and the relevant country is where the wood was harvested.

“Only the importer is liable.” The importer files and is liable, but it will not place your product on the market without your data.

Questions for the leadership team

1. Which of our EU product lines are in scope under the current Annex I?
2. For each wood input, do we know the country of harvest and the plot geolocation?
3. Which suppliers and traders cannot provide geolocation, and what share of volume do they represent?
4. Can we keep wood of known origin separate from other wood through production?
5. What has each of our EU importers asked for, in which format and by when?
6. Who in the company owns the EUDR data package for each shipment?
7. Which of our importers are micro or small timber operators that must comply from 30 December 2026?

What a good first step produces

A useful first step is a scope and data-availability check on your highest-volume EU product line: scope by customs code, a supplier and origin map, the geolocation and legality data that exists today, and the gaps. It should leave the leadership team with a clear view of which supply routes can serve EU buyers from 30 December 2026.

Ganrich Advisory runs this as a focused review with your purchasing, production and export teams. The importer remains responsible for its due diligence statement. We do not give legal opinions or certify deforestation-free status. We share the working method in a conversation rather than in print, because it depends on the supply chain.
