Fewer reporters, sharper questions: sustainability data requests after the EU Omnibus

The EU narrowed who must report and capped what large companies can ask of smaller suppliers. For Turkish exporters, the requests do not stop; they become more standard.

Ahmed Furkan Gul, Founder, Ganrich Advisory

October 2026

Executive summary

1. The Omnibus I Directive, published in the Official Journal on 26 February 2026, cut the scope of the Corporate Sustainability Reporting Directive to EU companies with more than 1,000 employees and more than €450 million in turnover, and narrowed the due diligence directive to very large companies, with compliance from 26 July 2029.
2. It also introduced a value-chain cap. Companies with fewer than 1,000 employees can decline requests for sustainability information that go beyond a voluntary standard. The Commission adopted that voluntary standard, based on EFRAG's VSME, together with simplified reporting standards on 3 July 2026, and reporting companies must respect the cap from financial year 2027.
3. For a Turkish supplier this changes the shape of the question, not its existence. The EU customers that still report will ask in a more standard format, and the largest buyers will keep asking because their own customers, lenders and product rules require it. A supplier that prepares one report along the voluntary standard can answer most requests with the same file.

What has changed

The Omnibus I Directive was published on 26 February 2026 and entered into force on 18 March 2026. Member states must transpose the reporting changes by 19 March 2027.

Under the amended Corporate Sustainability Reporting Directive, EU companies and groups are in scope only above 1,000 employees and €450 million in net turnover. Non-EU groups are in scope if they generate more than €450 million in EU turnover and have an EU subsidiary or branch above €200 million. Many companies that prepared for reporting are no longer required to report.

The value-chain cap protects smaller partners. Value-chain companies with fewer than 1,000 employees may decline requests for sustainability information beyond the disclosures in the voluntary standard. The Commission adopted the voluntary standard and revised European Sustainability Reporting Standards as delegated acts on 3 July 2026; the scrutiny period ended without objection on 4 September 2026.

The Corporate Sustainability Due Diligence Directive now applies to EU companies with more than 5,000 employees and €1.5 billion in turnover, and to non-EU companies with €1.5 billion in EU turnover. They must comply from 26 July 2029. These buyers will still map and assess their supply chains.

In Türkiye, the Public Oversight, Accounting and Auditing Standards Authority (KGK) requires sustainability reports under the Turkish Sustainability Reporting Standards (TSRS) from companies above its thresholds, which it updated in January 2026.

The decision behind the requirement

The cap gives smaller suppliers a right to say no, but saying no is rarely the commercial answer. The better move is to decide what you will report, in what format, and then answer every request from that base.

The voluntary standard offers that base. It covers a basic set of environmental, social and governance disclosures, such as energy use, greenhouse gas emissions, water, workforce and business conduct, at a level a mid-sized manufacturer can produce. Preparing it once turns a stream of questionnaires into a repeatable exchange.

Larger Turkish exporters, and those that report under TSRS or to EU parent companies, face a different decision: how to align TSRS, customer requests and product-specific data such as CBAM emissions or EUDR traceability, so that the same numbers appear everywhere.

Five common misreadings

“The Omnibus ended sustainability reporting.” It narrowed it. The largest EU buyers still report and still need supplier data for their own disclosures.

“The cap means we never have to answer.” It limits requests beyond the voluntary standard; it does not stop customers choosing suppliers who answer well.

“Product rules are covered by the cap.” CBAM, EUDR, battery, packaging and forced labour data are required by their own regulations and sit outside the cap.

“Our TSRS report answers EU customers.” It may cover much of the ground, but customers ask in their own formats and at product or site level.

“Only listed companies need to prepare.” Requests reach unlisted family companies through every large EU buyer.

Questions for the leadership team

1. Which of our EU customers remain in scope of the CSRD or the due diligence directive?
2. How many sustainability questionnaires did we receive last year, and in how many formats?
3. Could we prepare a report along the voluntary standard with the data we hold today?
4. Are our energy, emissions and workforce figures consistent across reports, questionnaires and product filings?
5. Do we report under TSRS, or will we cross its thresholds?
6. Which customer requests relate to product rules such as CBAM or EUDR rather than general reporting?
7. Who owns sustainability data across finance, operations and sales?
8. Would a published report strengthen our position with EU buyers and lenders?

What a good first step produces

A useful first step is a request and data review: the sustainability requests you receive, the data you hold, and a plan for one base report that answers most of them. It should leave leadership with a clear reporting position and an owner for each figure.

Ganrich Advisory runs this with your finance, operations and sales teams. We do not provide assurance or audit opinions on sustainability reports; those come from independent assurance providers. We share the working method in a conversation rather than in print, because it depends on your customers.
